# Anupam Suvankar

Jajpur Town, Odisha 755001
6370408280 | anupamsuvankar@gmail.com
My Profile: https://anupamsuvankar.github.io/personal/profile

## Professional Summary

**Python Developer** with 4+ years of experience at Amazon, in building **scalable applications, automation solutions, and data processing systems**. across enterprise environments. Strong expertise in **Python, Flask, Pandas, and Selenium**, with hands-on experience in developing **REST APIs, automation pipelines, and data-driven applications**. Proven ability to write clean, maintainable code following best practices, perform code reviews, and optimize performance. Adept at collaborating with cross-functional teams to deliver high-quality software solutions.

## Core Technical Skills

**Programming & Scripting**
- Python, JavaScript, Rest API

**Automation & Tools**
- Selenium, Flask, customtkinter
- Jenkins, Docker, GitHub

**Web & UI**
- HTML, CSS, Flask (Web Apps, Dashboards)

**Data & Databases**
- Pandas, NumPy, scikit-learn
- SQL, MongoDB
- Excel Automation (openpyxl, xlsxwriter)

**Systems & Networking**
- Linux, Windows
- Networking Basics, Protocols

## Professional Experience

**Python Developer – CMT** May 2024 – Present
Amazon | Bangalore, KA
- Develop backend systems, automation scripts, APIs, or data-processing pipelines
- Write optimized SQL queries and integrate Python with databases (MySQL, SQLite)
- Handle authentication, request validation, and error handling
- Deploy applications and monitor performance in production environments

**Python Developer – RBS** May 2021 – May 2024
Amazon | Chennai, TN
- Analyze existing workflows, SOPs, and recurring manual tasks
- Build tools using Python, SQL, or internal Amazon tools
- Create scripts, dashboards, trackers, bots, or web apps that eliminate manual effort
- Validate automation logic to prevent incorrect data processing
- Continuously improving tools based on performance and user feedback

**Apprentice – Line Supervisor** Jan 2020 – Dec 2020
Metalman Auto Pvt. Ltd. | Hosur, TN
- Supervised daily production line operations and workforce
- Ensured adherence to quality standards and SOPs
- Reduced defects through process monitoring and corrective actions

## Education

**Gandhi Institute of Engineering and Technology**, Gunupur, Odisha
- Bachelor of Technology – Mechanical Engineering CGPA: 7.86 | 2016 – 2020

**Jawahar Navodaya Vidyalaya**, Panikoili, Odisha
- Matriculation 8.6 CGPA | 2014 – 2016
- Intermediate 78% | 2012 – 2014

## Awards & Recognition

- Problem Solver Pin – Operations Manager (RBS)
- Deliver Results, Invent & Simplify, Ownership Pin – Catalog Manager
- An Extra Mile Award – Q2-2022, Q4-2023, Q2-2024
- Beyond and Above Award – Q3-2022, Q4-2023
- Sensei Award – Mentorship & New Hire Training Excellence
- Switch the Gear Award – Rapid upskilling and tech innovation
- Recognized for highest processing count during IN escalations

## Automation, Projects & ML

**Machine Learning**
Misclassified ASIN Detection Model
- Tech Stack: Python, Scikit-learn, Pandas, NumPy
- Built a machine learning model to detect misclassified ASINs
- Performed pattern analysis on detail page attributes
- Improved classification accuracy and reduced manual auditing

**Selection Central Suite**
Unified Automation Suite

- Tech Stack: Python, Pandas, Selenium, CustomTkinter
- Developed a centralized system integrating multiple tools:
    - Contribution Removal Automation
    - Data Extract & Upload Automations
    - Size Segregation Tool
- Created a unified dashboard for streamlined operations

**Automation & Data Tools**
Consolidation Automation

- Tech Stack: Python, Pandas, OpenPyXL
- Developed an automation tool to consolidate multiple Excel files into a unified dataset
- Improved processing speed and reduced manual errors in data handling

CSI Extractor

- Tech Stack: Python, Selenium, Pandas
- Built a web automation tool to extract structured data from internal portals
- Automated data collection and export to Excel for analysis

CSI Normalization Validator

- Tech Stack: Python, Pandas
- Designed a validation engine to check data format consistency and detect missing values
- Improved data quality and reduced manual validation effort

Item Form FRPG Validator

- Tech Stack: Python
- Attribute validation for item forms, minimizing manual QA checks before FRGP upload
- Ensured compliance with predefined data standards

Merchant Portal Automation

- Tech Stack: Python, Selenium
- Automated repetitive workflows on merchant portals
- Reduced manual effort and increased operational efficiency

PPU Display Automation

- Tech Stack: Python, Selenium, Pandas
- Extracted Price-Per-Unit data for pricing compliance analysis
- Enabled bulk data processing for auditing use cases

Processed File Translation Tool

- Tech Stack: Python, Pandas
- Transformed raw associate inputs into standardized structured datasets
- Improved downstream processing and reporting accuracy

**Dashboards & Systems**
Production Display Dashboard

- Tech Stack: Python, Pandas, CustomTkinter
- Developed a real-time dashboard for tracking production metrics
- Enabled better visibility and decision-making for operations

URL Navigator Dashboard

- Tech Stack: Python, Tkinter / CustomTkinter
- Built a GUI-based tool for quick navigation and updates of Amazon detail pages
- Improved productivity by reducing manual navigation time

Redrive Engine

- Tech Stack: Python, SMTP (Email Automation), Scheduling
- Designed a daily engine for task redrived and automated email notifications
- Reduced manual monitoring and improved process reliability

**Web Applications**
Productivity & Shrinkage Tracker (RBS & CMT)

- Tech Stack: Python (Flask/Django), HTML, CSS, JavaScript, Pandas
- Developed a web-based application to track productivity and shrinkage metrics
- Implemented automated email reminders for daily updates and Generated team-level reports for stakeholders
- Maintained historical associate mapping (CMT module)
