Professional Summary

Automation & Data Operations Professional with 4+ years at Amazon, specializing in process automation, data analysis, and operational tooling. Proven track record of building Python, Selenium, and Pandas based automations, improving productivity, data accuracy, and turnaround time across RBS and CMT teams. Experienced in end-to-end automation, dashboarding, and ML-based data quality detection, with strong ownership and multiple excellence awards.

Core Technical Skills

Programming & Scripting
- Python, JavaScript

Automation & Tools
- Selenium, Flask, customtkinter
- Jenkins, Docker, GitHub

Web & UI
- HTML, CSS, Flask (Web Apps, Dashboards)

Data & Databases
- Pandas, NumPy, scikit-learn
- SQL, MongoDB
- Excel Automation (openpyxl, xlsxwriter)

Systems & Networking
- Linux, Windows
- Networking Basics, Protocols

Professional Experience

Python Developer – CMT May 2024 – Present
Amazon | Bangalore, KA
- Develop backend systems, automation scripts, APIs, or data-processing pipelines
- Write optimized SQL queries and integrate Python with databases (MySQL, SQLite)
- Handle authentication, request validation, and error handling
- Deploy applications and monitor performance in production environments

Python Developer – RBS May 2021 – May 2024
Amazon | Chennai, TN
- Analyze existing workflows, SOPs, and recurring manual tasks
- Build tools using Python, SQL, or internal Amazon tools
- Create scripts, dashboards, trackers, bots, or web apps that eliminate manual effort
- Validate automation logic to prevent incorrect data processing
- Continuously improving tools based on performance and user feedback

Apprentice – Line Supervisor Jan 2020 – Dec 2020
Metalman Auto Pvt. Ltd. | Hosur, TN
- Supervised daily production line operations and workforce
- Ensured adherence to quality standards and SOPs
- Reduced defects through process monitoring and corrective actions

Education

Gandhi Institute of Engineering and Technology, Gunupur, Odisha
- Bachelor of Technology – Mechanical Engineering CGPA: 7.86 | 2016 – 2020

Jawahar Navodaya Vidyalaya, Panikoili, Odisha
- Matriculation 8.6 CGPA | 2014 – 2016
- Intermediate 78% | 2012 – 2014

Awards & Recognition

- Problem Solver Pin – Operations Manager (RBS)
- Deliver Results, Invent & Simplify, Ownership Pin – Catalog Manager
- An Extra Mile Award – Q2-2022, Q4-2023, Q2-2024
- Beyond and Above Award – Q3-2022, Q4-2023
- Sensei Award – Mentorship & New Hire Training Excellence
- Switch the Gear Award – Rapid upskilling and tech innovation
- Recognized for highest processing count during IN escalations

Automation, Projects & ML

◆ **Machine Learning**

Misclassified ASIN Detection Model
- Tech Stack: Python, Scikit-learn, Pandas, NumPy
- Built a machine learning model to detect misclassified ASINs
- Performed pattern analysis on detail page attributes
- Improved classification accuracy and reduced manual auditing

🔹 **Selection Central Suite**

Unified Automation Suite

- Tech Stack: Python, Pandas, Selenium, CustomTkinter
- Developed a centralized system integrating multiple tools:
  - Contribution Removal Automation
  - Data Extract & Upload Automations
  - Size Segregation Tool
- Created a unified dashboard for streamlined operations

🔹 **Automation & Data Tools**

Consolidation Automation

- Tech Stack: Python, Pandas, OpenPyXL
- Developed an automation tool to consolidate multiple Excel files into a unified dataset
- Improved processing speed and reduced manual errors in data handling

CSI Extractor

- Tech Stack: Python, Selenium, Pandas
- Built a web automation tool to extract structured data from internal portals
- Automated data collection and export to Excel for analysis

CSI Normalization Validator

- Tech Stack: Python, Pandas
- Designed a validation engine to check data format consistency and detect missing values
- Improved data quality and reduced manual validation effort

Item Form FRPG Validator

- Tech Stack: Python
- Attribute validation for item forms, minimizing manual QA checks before FRGP upload
- Ensured compliance with predefined data standards

Merchant Portal Automation

- Tech Stack: Python, Selenium
- Automated repetitive workflows on merchant portals
- Reduced manual effort and increased operational efficiency

PPU Display Automation

- Tech Stack: Python, Selenium, Pandas
- Extracted Price-Per-Unit data for pricing compliance analysis
- Enabled bulk data processing for auditing use cases

Processed File Translation Tool

- Tech Stack: Python, Pandas
- Transformed raw associate inputs into standardized structured datasets
- Improved downstream processing and reporting accuracy

🔹 **Dashboards & Systems**

Production Display Dashboard

- Tech Stack: Python, Pandas, CustomTkinter
- Developed a real-time dashboard for tracking production metrics
- Enabled better visibility and decision-making for operations

URL Navigator Dashboard

- Tech Stack: Python, Tkinter / CustomTkinter
- Built a GUI-based tool for quick navigation and updates of Amazon detail pages
- Improved productivity by reducing manual navigation time

Redrive Engine

- Tech Stack: Python, SMTP (Email Automation), Scheduling
- Designed a daily engine for task redrived and automated email notifications
- Reduced manual monitoring and improved process reliability

🔹 **Web Applications**

Productivity & Shrinkage Tracker (RBS & CMT)

- Tech Stack: Python (Flask/Django), HTML, CSS, JavaScript, Pandas
- Developed a web-based application to track productivity and shrinkage metrics
- Implemented automated email reminders for daily updates and Generated team-level reports for stakeholders
- Maintained historical associate mapping (CMT module)
